## Investment Risks

### Market Risk

The investment returns of this Fund are highly correlated to the short term interest rate levels of money market instruments and/or deposit account rates. Fluctuations of these rates due to changes and developments in economic factors, monetary policy and geo-political factors will impact the returns earned by this Fund.

### Credit Risk

The Fund is exposed to the credit risks of the issuers of the money market instruments, and/or the credit risk of deposit taking institutions in the case of deposit accounts. Any factors that may impair the ability of the issuers/deposit takers in fulfilling the redemption obligations of the instruments may result in default of the said instruments and impair the value of the Fund. This risk is mitigated by focusing on issuers/deposit takers of high credit standing, and/or by using any other credit enhancement mechanism to reduce the credit risk exposure of the Fund.

## Risk Management

### Operational Risk

Prudential Assurance Malaysia Berhad has risk management and control procedures for assessing, monitoring and limiting operational risks in relation to unit valuation.
